

This is a 6 page folder I sent out in June 1976

Supplies Standard Sync Pulses  
 \*Horizontal Drive \*Composite Blanking  
 \*Vertical Drive \*Burst Flag  
 \*Composite Sync \*Subcarrier

\*: 4vpp Squarewave #: 2vpp Sine wave  
 Outputs will drive standard 75Ω load

Selects machine sync. from 1 of 2 sources  
~~and~~ switches all 6 sync signals at once  
 Controlled by Digital pulse ~~or~~ switch

Hard Edge Keyer  
 Superimposes 1 image on top of another  
 Keying can be done with external (3rd) image

input A

input B

input C

Keyer Out

Controls:

- x A-gain
- x B-gain
- x clip level
- o Key Normal
- o Key Reverse
- x Pedestal Balance
- x Output Pedestal
- o Key on/off
- o filter on/off

x = Pot. o = switch

Soft Edge Keyer

Superimposes but has an adjustment of how sharp the edges are

in A

in B

in C

Controls

- x A-gain
- x B-gain
- x clip level
- o Key on/off
- x Ped. Balance
- x Output Ped.
- x Soft-to-Hard
- o filter on/off

### Simple Colorizer

1 video in  
 Color Determined by 2 control voltages  
 or Joystick  
 also Gain & Ped. controls

### Color 2

Red, Green, & Blue inputs  
 " " & " gain pots  
 " " & Blue Pedestal "  
 Luminance gain & Ped pots

Joystick color control B-Y, & R-Y bias

### Switches & Displays

multiples of 8

busses, LED displays, Matrixes

### Distribution Amp

6 Hi-Z inputs

each has 4 low Z outputs and a gain control

5

Output Amp

Gain & Ped. controls  
Sync. Reinsertion  
black clip & white clip

Input Amp

Same as above but  
without white clip

Rack

will hold modules  
& Distribute power & Sync.

Control Panels

custom remote control panels  
of any size

### D-A converter

20 D-A's with switch for 9, 8, 7, 6, 5, 4, 3, 2 bits, & gain control.

### A-D converter

Converts 1 video image into Digital information

### Time Base Corrector

### Gen lock

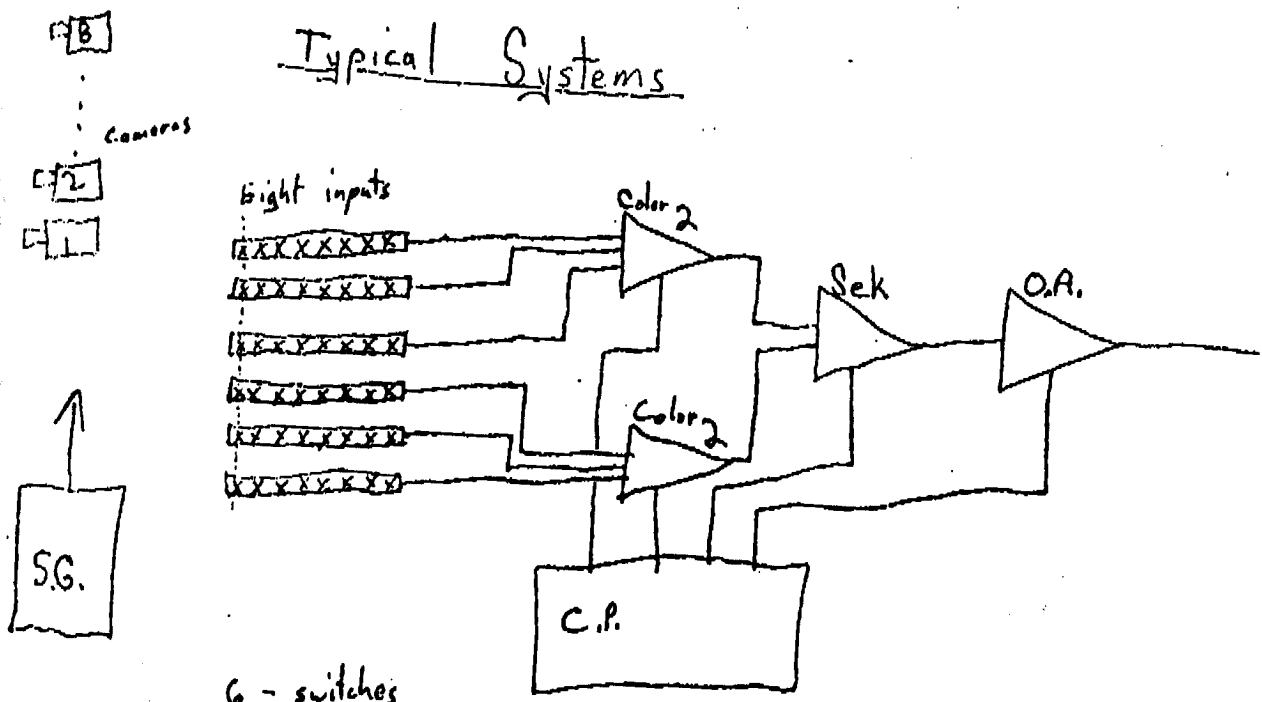

1 video in Sync. out

### Digital Processing

# Typical Systems

- 6 - switches
- 2 - Color 2
- 1 - Soft Keyer
- 1 - Output Amp
- 1 - Sync. Gen
- 1 - Central Panel
